Sebastián Betancourt

Software Developer · Integrations & Backend

Bucaramanga, Colombia · Remote (UTC−5) • +57 302 434 1150 • s3basbetan@gmail.com • sebas-betancourt.vercel.app • linkedin.com/in/sebastian-betancourt-605654293 • github.com/sebasBetancourt

Software developer specialized in integrations and backend systems. I design scalable, maintainable services with Clean Architecture and SOLID principles, and connect products to third-party platforms through REST APIs, webhooks and OAuth 2.0. Experienced across the full lifecycle: architecture, data modeling, testing, deployment and production support, including AI agents and automation.

PROFESSIONAL EXPERIENCE

Adeptos AI – Startup ***Remote***
Software Developer · AI & Integrations *Apr 2026 – Oct 2026*

- Designed and built integrations between SaaS platforms and third-party services using REST APIs, webhooks and OAuth 2.0, with real-time and two-way data synchronization.
- Developed AI agents and MCP (Model Context Protocol) servers to automate business workflows, with schema validation and per-tenant credential isolation.
- Built backend services in Go and TypeScript on PostgreSQL and Redis, applying idempotency, distributed rate limiting and concurrency control across replicas.
- Diagnosed and resolved production incidents through root-cause analysis; containerized and deployed services with Docker.

Colectivo Waiwa SAS – SaaS Platform ***Bucaramanga, Colombia · Hybrid***
Software Developer *Jan 2026 – Present*

- Built scalable backend modules with Node.js, Fastify and TypeScript following Clean Architecture and SOLID.
- Integrated the platform with external services (distribution channels and electronic invoicing) through APIs and webhooks, handling data synchronization and retries.
- Modeled relational data in PostgreSQL with transactions and protection against SQL injection; documented APIs with OpenAPI.
- Built user interfaces in React and Next.js, deployed with Docker on Linux servers and worked in agile sprints with Git and Jira.

IASD Norte Bucaramanga – Volunteer ***Bucaramanga, Colombia***
Software Developer *Dec 2025 – Present*

- Built and maintain the organization's official website with Next.js, TypeScript and Tailwind.

PROJECTS

Relay – Open source · Go ***github.com/sebasBetancourt/Relay***
One API for multiple providers, starting with calendars (Google Calendar and Outlook): OAuth 2.0 + PKCE, AES-256-GCM token encryption, replica-safe token refresh, end-to-end tests and automated CI/CD releases.

PelixFlix – Full stack · TypeScript ***streaming-psi-olive.vercel.app***
Streaming platform with ~10,000 titles: layered Fastify API, JWT authentication, rate limiting, catalog synchronization with locking and dry-run mode, and 130+ automated tests.

EDUCATION

Unidades Tecnológicas de Santander (UTS) — B.S. in Artificial Intelligence Engineering *In progress*

CampusLands — Advanced Programming Bootcamp *2024 – 2025*
Honors: final project recognized for its architecture, design patterns and testing.

SENA — Software Development Technician *2023 – 2024*
Honors: outstanding final project of the program.

ADDITIONAL SKILLS

Architecture & design	Clean Architecture, SOLID, design patterns, layered design, scalable systems, REST API design
Integrations	OAuth 2.0 / PKCE, webhooks, event-driven flows, two-way sync, idempotency, AI agents / MCP
Quality & reliability	Unit, integration & e2e testing, CI/CD, transactions, concurrency control, rate limiting, OWASP
Languages & frameworks	Go, TypeScript, JavaScript, Python, SQL · Node.js (Fastify, Express), Fiber, GORM, React, Next.js
Data & infrastructure	PostgreSQL, MongoDB, Redis, Docker, Nginx, Linux, GitHub Actions, Git, Jira
